

RAM BOOSTER EXPERT

- DATASHEET -

RAM Booster Expert is an award winning memory optimization tool.

How does RAM BOOSTER EXPERT work?

Many software products, including Windows, load a huge amount of libraries in memory, but not all of them are necessary. Our memory optimizer product will find these memory blocks and will unload them to the page file. When some of this data becomes necessary it is loaded back to RAM memory again. Sometimes when applications close, not the entire allocated memory is released. RAM Booster Expert finds these memory leaks and flushes them, increasing size of free memory. Also RAM Booster Expert make a memory de-fragmentation that reduce the needed time for CPU to find the information.

KEY FEATURES:

- Increase the amount of free memory available
- Recovers memory from Windows and running applications
- De-fragment physical memory
- Scheduled optimization function
- Powerful process manager
- Powerful startup manager
- Multilanguage support
- Easy to use and attractive interface
